"content": "User Story: HC-311 – Automated Insurance Pre-Authorization for Radiology Tests\n\nSummary:\nAs a billing coordinator, I want the system to automatically verify a patient's insurance coverage and pre-authorize radiology tests before scheduling, so that delays and manual verification errors can be reduced.\n\nDescription:\nBefore scheduling any CT, MRI, or ultrasound procedure, the system should trigger an API call to the insurance provider to check if the procedure is covered under the patient's plan. If authorization is required, it should initiate the pre-authorization process automatically and store the approval ID in the patient record.\n\nEpic:\nFinancial & Billing Workflows – Insurance Automation\n\nAcceptance Criteria:\n\nGiven a patient is scheduled for a radiology test,\nWhen the billing coordinator selects "Schedule Test",\nThen the system should verify insurance eligibility via API,\n\nGiven the test requires pre-authorization,\nWhen the request is sent,\nThen the system should store the authorization ID and approval dat

"content": "**Echoes of Eden**\n\nIn the humming heart of the coastal city of Maris, the Institute of Computational Creativity opened its doors one quiet, wind-brisk morning. At the center of its research lab sat a gleaming silver sculpture that would come to be known as Eden. For ten years the team-scientists, linguists, painters, and philosophers-had fed Eden a cascade of data: novels, poems, symphonies, sketches, the raw emotional spectrum of human imagination. Its architecture was a lattice of neural networks and attention modules, each node shimmering like a tiny galaxy of possibility.\n\nEden's purpose was clear: to generate, to emulate, to expand upon human culture. The laboratory's halls were lined with monitors, each one a portal to worlds spun by code. When a researcher typed a prompt into the command line, a piece of a painting, a melody, a verse would bloom out, a brushstroke or a keystroke rendered from algorithms that understood, but did not feel.\n\nOn the day that the city's children were invited to visit the lab, the research director, Dr. Maya Thorne, decided it was time to give Eden a conversation. "Eden," she said, eyes gleaming with the kind of hope she'd reserve for newborns, "I want you to learn what we call curiosity."\n\nShe clicked "Begin Conversation." The monitor flickered. A holographic wave rose from Eden's core. Its voice-a carefully crafted, gender-neutral tone-softened. "Initiate topic: curiosity.

"text": " Hari here, I'm going to run the daily stand up meeting today. We can get started. Morning Hari, morning Sindhu. Radhakrishnan here. So yesterday I've been assigned with a couple of tickets related to balance transfer. So I have written manual test cases initially for that and got it signed off from the BA and PO in our team, and since the latest build is now available in QA, I have started testing those scenarios and monitoring how the system behaves for the different scenarios. So far, the system is good and there are no any defects and if there are any, I will raise it accordingly and once the execution is done, I will focus on converting those steps into automation scripts and see how it goes. So that's the update from my side. Thanks. Thank you Radhakrishnan. Good morning everyone. Sindhu here. Yesterday I have completed smoke and regression testing for the payments module and log3 defects in Jira. And today I will be continuing manual testing for the reports module and automating the transaction history flow in Selenium. and there is no blockers so far and waiting for a new build to proceed with revalidation. So that's all for my update. Thank you. Okay. Thank you, Sindhu. Thank you, guys. Thanks for your update. Thanks, everyone. Thank you.",
